

# Weighing Scale Integration Guidelines

Ensuring seamless integration with APT application

## 1 Plug-and-Play Setup

There is no separate configuration for the weighing scale; it should work as a **plug-and-play device**. When connected via USB, it shall be detected automatically by the operating system.

## 2 One-Time Daily Confirmation

Confirmation about the weighing scale will be prompted to the user **for the first time in the day**, and the same settings will be applied until there is a change (e.g., weighing scale unplugged, power failure, USB/hardware failure, etc.).

## 3 Fetch Weight Feature

If any weighing scale is already attached and detected by the OS, then the user can click on the **Fetch Weight button** in the booking screen to get the weight from the connected weighing scale device.

## 4 Gram-Based Measurement

Offices purchasing weighing scales should opt for a device returning a response in **grams** or should have the functionality for conversion of weight into grams, even if the display is in other units.
